

# Do something to be proud of.

“I was a contracting consulting engineer in the water industry for the past ten years, including working on the AMP6 Programme for Thames Water for the last five years. I joined Thames Water as a permanent staff member in October 2020. After being associated with Thames Water over this time, joining seemed the obvious and sensible thing to do and I have not regretted my decision.

My role at Thames Water allows me to engage with a variety of staff across various departments in the business. Fellow colleagues and managers are always considerate and supportive. My line manager ensures that we have a one-to-one appointment every week which is very productive.

I count it a privilege to be part of the Thames Water family whose top priority is to keep all staff healthy and safe every day at work”

Robin Dwight, Senior Engineer in Capital Delivery
